For jointing of telephone cables on IDC's in a 67mm surface box. 25900003

modempak

Since its inception in 1978, MODEMPAK has been at the forefront in designing, manufacturing and distributing data and telecoms products for the New Zealand marketplace. Today, its data and telecoms products can be found in over 1 million homes as well in the commercial and all other market sectors across New Zealand.

Much of the Telecommunication product development over the past 31 years has been in concert with Telecom New Zealand to ensure MODEMPAK products installed in the Telecom network are of the highest standard possible.

In 2009 MODEMPAK released a new Telecoms jack point connector product (BT2C) designed specifically to cater for New Zealand's high moisture (humidity) environment. This jack point utilises state-of-the-art lead frame technology eliminating printed circuit boards and solder points – both areas of potential failure and cause of network errors.

MODEMPAK is committed to the highest standard of product excellence. Critical performance components are proudly designed and manufactured in New Zealand and exceed the quality standards in all countries where MODEMPAK products are sold.
